

Summary Findings

Executive Summary:

UVA received about \$22 million in foreign gifts across 98 donations. This placed it ahead of some of its ACC peers but far behind schools that dominate foreign giving nationally. These schools such as Carnegie Mellon, Cornell, Harvard, and Duke to name a few, have done extremely well with foreign gift donations. UVA's funding is spread across its many small donors rather than having a concentrated country. Compared to the colleges with higher donations, UVA has little support in compare from the Middle East region. If UVA wants to grow in foreign giving, the school has to attract donors through using different strategies such as research partnerships or leaning into its medical connections.

Looking into the data:

Looking at the main dataset of foreign gifts to U.S. academic institutions, the top schools on the list are highly concentrated. Qatar gives the most money overall at about \$2.7 Billion while England gives the most total gifts at 3655. Bermuda gives the most gifts on average, about \$7.7 million. Carnegie Mellon receives the most foreign money, with over \$1.4 billion in donations. The Qatar Foundation are consistently the top donors of the U.S. Institutions as a whole. This shows that the middle east, Qatar in general, are willing to give large amounts of money to certain institutions.

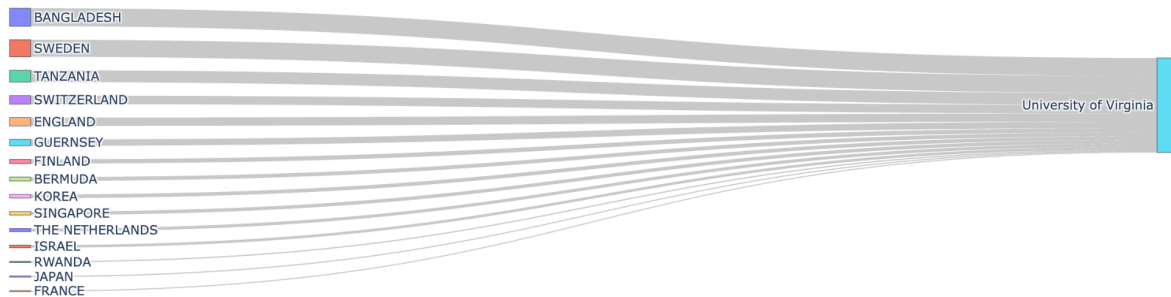

Comparison Schools:

1. University of Virginia
2. University of Louisville
3. Clemson University
4. Syracuse University
5. University of Miami
6. Duke University

Comparision:

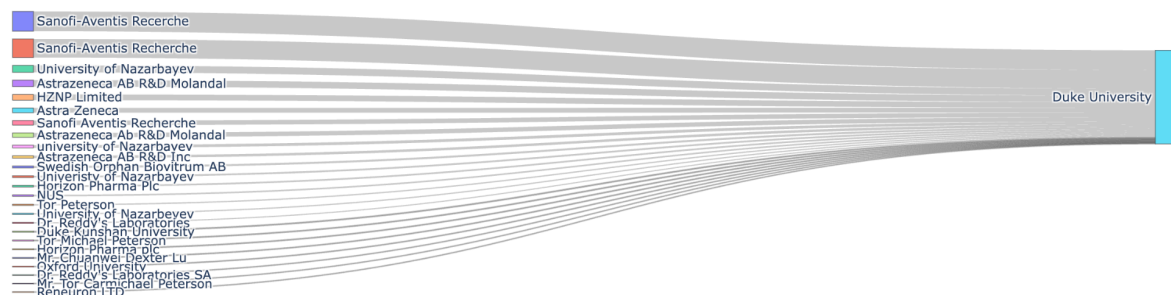

The goal of this was to compare the University of Virginia (UVA) to other ACC schools of similar caliber to see how they stack up in foreign funding. Among the schools listed, UVA performs well. It receives the second most funding from this group with only Duke outperforming it. UVA's foreign funding is spread across many small revenue streams from different countries and donors. The flow chart below shows the countries that donate to Virginia by how much they donate.

UVA received 98 gifts in total. 64 came through contracts while 34 came through monetary gifts. Across the ACC schools listed above (excluding Duke for reasons below), the average foreign donations was \$15,797,209. UVA's total came in at \$22,189,238, well above that average. This reinforces the idea that UVA was outperforming its ACC peers of similar sizes.

A Closer Look at Duke:

Digging deeper into another well known ACC school, Duke stood out significantly. Its foreign donations exceeded the combined total of every other ACC school on the list. Duke received over \$340 million across 145 total foreign gifts. Duke's strong donor base can largely be attributed to its research reputation and extensive alumni network. Notably, Duke's top donor from France was Sanofi-Aventis Recherche, a pharmaceutical research and biopharmaceutical company. Another donor, the Leducq Foundation, has grant funding tied to treatments for heart muscle diseases. Both of these have medicine in common, as Duke's medical department is known as one of the best in the entire US.

Strategy:

UVA could adopt certain strategies to help find foreign money donations. Compared to the highest donated colleges, UVA does very poorly. Schools such as Carnegie Mellon, Cornell, Harvard, and MIT do very well in donations. There are certain things UVA has in common with them. All these schools are located on the east coast and are academically well known institutions. UVA should try and look into how all these schools are receiving these donations and see if it could access them as well. Carnegie Mellon draws large amounts of donations from Bermuda and Qatar with Qatar alone giving over \$400 million. Looking into the Middle East, you can see that countries in that region seem to donate a lot of money to certain colleges. (an example from an ACC school is that Saudi Arabia gives large donations to Syracuse).

Another strategy for UVA is to lean into its medical research department. As said before, Duke medicine is very well known and its biggest donors come from the medical research department. UVA also has a very well known medical department and could lean into that for research grants or other opportunities to get foreign funding.

Conclusion:

UVA performs well in foreign donations compared to institutions of similar size, but there is clear room to grow relative to its reputation. As a well known institution with a strong medical program, UVA is well positioned to pursue funding to support the school in various amounts of ways.
